# CHAPTER 1: SCOPE

## 1.1 SCOPE

This user guide describes the commands and parameters of the Command Line Interface (CLI) as implemented in the current version of Industrial Ethernet Switches software. These commands are used to set up, administer and maintain the system.

## 1.2 AUDIENCE

The guide is intended for operating personnel.

## 1.3 PRE-REQUIRED KNOWLEDGE

The reader must be familiar with the:

- ◆ Basic operations of industrial Ethernet Switches series (see the Hardware Installation Guide).
- ◆ Security and activity monitoring constraints that limit how a command is implemented.

## 1.4 ACCESS TO HARDWARE INTERFACE

Access to the hardware interface is by a terminal (or computer with terminal emulation software). Requirements for the terminal are:

- ◆ RS-232 ASCII port
- ◆ Selectable transmission baud rate
- ◆ Full alphanumeric capability
- ◆ Selectable odd/even or no parity check

# CHAPTER 2: OPERATOR INTERFACE

## 2.1 INTRODUCTION

Access to the Switch is protected by a logon security system. You can log on to the switch with the user name and password. After three failed logon attempts, the system refuses further attempts.

After you log on, the system monitors the interface for periods of inactivity. If the interface is inactive for too long, you are automatically logged off.

The CLI initial user name is (admin) and none password (). You should change the password as soon as possible, because the initial password is known to anyone who reads this manual. You can also change the user name or add additional user names. Use the “account add” command to enter a new user identification, password and authorization level.

## 2.2 CONNECT INTERFACE

**TABLE 2-1. CONNECT INTERFACE**

INTERFACE	PARAMETER
CONSOLE	Baud rate: 115,200 bps; Data bit: 8; Parity: None; Stop bit: 1
TELNET	Port 23
SSH	Port 22 (In Windows, you can run a terminal emulator, such as PuTTY)

## 2.3 SCREEN DESCRIPTION

1. Connect to the Industrial Ethernet Switch port (RJ-45 Ethernet port)
2. Key in the command under Telnet: telnet 192.0.2.1
3. Log in with the default account and password:

Username: admin

Password: none (Just press the Enter key.)

### 2.4 EXECUTION MODES

The CLI contains several execution modes. Users will see different set of commands under different execution modes. Table 2-1 lists all the execution modes and their purposes. When users enter a certain execution mode, the corresponding mode prompt will be displayed automatically on the screen. The mode prompts of all the execution modes are also listed in Table 2-2.

### 2.5 GETTING HELP

The user can get help by entering a question mark '?' at each position in the command. The displayed result depends on the execution mode and previous input.
