- ♦ The display may be any HDMI display device such as a TV, video wall, interactive whiteboard, projector, etc.

CHAPTER 4: EDID MANAGEMENT

EDID (Extended Display Identification Data) is a data structure generated by a digital display to communicate its capabilities, such as its native resolution, to the attached source device.

The splitter supports MIX EDID, Fixed EDID and Copy EDID functions. The desired function can be set using the EDID rotary switch on the rear panel. When connected to multiple displays simultaneously, the splitter will compare the EDID of all displays and output the corresponding video resolution and audio channel depending on the switch setting.

The default setting is at position "0." Set the EDID using the following table:

TABLE 4-1. EDID SETTINGS

MODE	DESCRIPTION	FUNCTION
0 (Default)	MIX EDID: Video compatibility and Audio quality	Outputs the best audio channel and the most suitable video resolution for all displays supported.

3. Devices: Make sure the picture can be shown normally when connecting source to display devices directly.
4. Cable: Plug in and out the HDMI cable or try another HDMI cable.

Make sure the HDMI cable length is within the transmission range listed in the following table based on different resolutions.

TABLE 6-1. RESOLUTION AND TRANSMISSION RANGE

CABLE	RESOLUTION	MAXIMUM DISTANCE
HDMI	4K @ 30 Hz, 1080p @ 60 Hz	33 ft. (10 m)
	4K @ 60 Hz	10 ft. (3 m)

NOTE: These are maximum distances and depending on cable and other factors, cannot be guaranteed.

5. EDID: There are multiple output states for video and audio depending on the EDID rotary switch settings. Refer to Chapter 4, EDID Management to ensure the displays work properly.
6. Compatibility: Test other source and display devices to determine if it is a compatibility issue.
